

The 'Megaflow' center-less conveyor is capable of throughputs of up to 30 tons per hour. An alternative to the AMC.

Spiroflow Solution

Aero mechanical and center-less screw conveyors are widely used for filling road tankers and can be mounted on mobile frames for ease of use.

Spiroflow can also offer a bulk bag (FIBC) or rigid bin discharge station as an integral part of the loading system. High level probe in discharge spout insures automatic conveyor shut-off once the tanker section is filled.

Aero Mechanical Conveyors convey a wide range of materials in various bulk densities & will not de-mix materials

Product can be fed into an aero mechanical conveyor from a bulk bag (as shown above), silo, blowing line or mechanical shovel.

How Can Spiroflow Help Your Business?
