

Tilting Mobile Conveyor

Combining a Flexible Screw Conveyor with an integral Bag Dump/Sack Tip Hopper, each unit can be furnished with a variety of dust hood designs to reduce operator exposure to dust while emptying bags. This mobile unit can also be connected to a central extraction system and/or an empty bag disposal system to further minimize operator exposure. Safety interlocked access panels and removable working parts ensure that the conveyor can be thoroughly cleaned to avoid cross-contamination between batches.

- Robust Design That's Easily Moved
